

# Whirl App Presentation

GERALD, THOMAS, NGUYEN, CARTER, AND COLE

# Our Purpose

Our goal was to create a platform where LSU students can comfortably reach out, break the ice, and form genuine connections. Whirl is designed to make socializing feel more natural and less intimidating than approaching someone in person. By giving students a welcoming online environment to discover shared interests, start conversations, and join meetups, we aim to help transform those first interactions into meaningful friendships and a stronger sense of community on campus.

Since our last update, we've successfully built and expanded several core features.

# Tech Stack Overview

## Tech Stack Overview

Our app is built on a modern foundation that supports real-time features, LSU-verified authentication, and smooth cross-platform performance.

React Native (Expo) – Cross-platform mobile UI

Supabase Backend – Auth, database, storage, and RLS

PostgreSQL Database – Profiles, meetups, posts, messaging

Supabase Auth – LSU email/password login flow

Supabase Storage – Avatars, media uploads, event photos

TypeScript – Strongly-typed, reliable mobile codebase
